

*** Diagnosis/Diagnoses: ***

1.: Excision specimen from peritoneum with angiectasia and subserosal fibrosis.

2.: Colonic resection specimen (evidently sigmoid) with an ulcerated carcinoma of the colon of the histological type of a moderately differentiated colorectal adenocarcinoma, measuring 2 cm in its largest diameter and extending to a maximum of 8 cm from the resection margin. Invasive tumor spread to the level of the muscularis propria.

Oral and aboral resection margin tumor-free.

Twenty-six mesocolic lymph nodes tumor-free and with uncharacteristically reactive changes.

Tumor stage therefore pT2 pN0 (0/26) L0 V0; G2 R0.
