

*** Diagnosis / Diagnoses: ***

Right hemicolectomy specimen with an ulcerated colon carcinoma conforming to the histological type of a moderately differentiated colorectal adenocarcinoma, located 1 cm aborally from Bauhin's valve and measuring 4 cm at its greatest diameter. Invasive spread of tumour into the outer layers of the muscularis propria.
Oral and aboral resection margins and large omentum tumor-free.

Twelve mesocolic and mesenteric tumor-free lymph nodes, with uncharacteristic reactive changes.

Tumor stage is therefore pT2 pN0 (1/12), L0, V0; G2,
