

Department of Cancer Pathology

## Examination: Histopathological examination

Patient: XXX

PESEL: XXX

Age: ■

Gender: ■

Material: **Total organ resection – segment of the large intestine**

Unit in charge: ■

Physician in charge: ■ ■ ■

Material collected on: ■

Material received on: ■

Expected time of examination: ■

Clinical diagnosis: **Tumour of the hepatic flexure.**

Examination performed on: ■

### Macroscopic description:

**An 18 cm length of the large intestine with a piece of the mesentery sized 20 x 7 x 5 cm, with a 7.5 cm length of the small intestine, and a fragment of the omentum sized 11 x 8 x 1,5. A cauliflower-shaped, ulcerous tumour sized 5.5 x 4 x 2.2 cm found in the mucosa. The lesion surrounds 100% of the intestine circumference, narrowing its lumen, is located 10.5 cm from the proximal incision line, 7 cm from the distal incision line, and 3 cm from the Bauhnin's valve. Minimum side margin 6.5 cm.**

### Microscopic description:

**Adenocarcinoma tubulopapillare partim mucinosum (G3).**

**Infiltratio carcinomatosa tuncae muscularis propriae et telae adiposae pericolicae.**

**Incision lines clear of neoplastic lesions.**

**Metastases carcinomatosa in lymphonodis (No III/VI). Infiltratio carcinomatosa telae adiposae perinodalis. Lymphonodulitis reactiva No XVIII).**

**Adjacent omentum fragment free of cancer.**

### Histopathological diagnosis:

**Adenocarcinoma tubulopapillare partim mucinosum coli. Tubulopapillar and partially mucinous adenocarcinoma of the colon. (G3, Dukes B, Astler-Coller B2, pT3, pNO).**
